Version 5.4.0 Update

March 19, 2018

Table of Contents

MEASURE AUTHORING TOOL RELEASE NOTES	1
SYSTEM FIXES	3
1.0 UPDATED VERSION NUMBER IN ALL EXPORTS ON THE MAT TO VERSION 5.4	ERROR! BOOKMARK NOT DEFINED.

System Fixes

A description of the system fix included in the Measure Authoring Tool (MAT) version 5.4.0 Update is listed below. For further information on the enhancements and processes of the MAT tool, including the use of CQL, please visit the MAT public website and read the 5.4 User Guide found on the Training and Resources tab: <https://www.emasuretool.cms.gov/>.

1.0 Update version number in MAT exports on 'Version'

MAT has been updated to address an issue where the version in the file names of some of the exports in the MAT package were displaying a previous version. When a user updates a draft measure in the MAT and re-exports a MAT package, the MAT artifacts (HQMF, Human Readable, CQL, ELM, and JSON) update to align with the revised draft version. When a measure is versioned (major or minor), the HQMF and Human Readable files reflect the version of the measure, but the CQL, ELM, and JSON files reflected the previous version of the CQL. This update has aligned the CQL, ELM, and JSON parent file names to match the version of the measure once it has been made a major or minor version.
