

# Bonnie v6.2.5 FHIR Release Notes

Bonnie FHIR version 6.2.5 is available as of Tuesday December 13, 2022, at 8am ET. Below are the updates to Bonnie for version 6.2.5:

- JSON export files for test cases exported after this release have been updated.
  - The MeasureReport resource has been removed from JSON export files exported after the release.
  - The QI-Core Patient Profile URL has been added to all patients. This will prevent users from having to add the URL to test cases exported after the Bonnie FHIR 6.2.5 release.
  - The Medical Record Identifier has been added to all patients. This will prevent users from having to add the identifier to test cases exported after the Bonnie FHIR 6.2.5 release.
- To generate test cases with these updates, Bonnie FHIR users can choose to reexport the .zip file and save it to their desired location
