

MADiE 1.0.1 Release Notes

The following updates are included in the MADiE 1.0.1 release:

Category	Feature Description
508 Compliance	Updates were made throughout MADiE to update display and navigation for 508 compliance.
CQL Library	The View/Edit dropdown has been updated for users who do not own the CQL Library to prevent them from clicking on the Draft and Version actions.
CQL Library	Validation messages are now displaying correctly when a user is editing a CQL Library, and they make updates to any field other than the CQL Editor.
CQL Library	Validation messages are now displaying correctly when a user fails to enter required information when creating a new CQL Library.
Measure Creation	Users will now receive an error upon measure creation if the Measurement Period start and end dates are the same.
Measure Creation	The validation message alerting users they must enter a Measure CQL Library name upon measure creation has been updated.
Measure Creation	The Population Criteria section has been updated for users who do not have edit access from clicking on any editable fields.
Measure Creation	When users edit the Measure Library Name, and if no CQL errors are present upon saving, the updated Measure Library Name will now be reflected in the Measure CQL.
Measure Creation	The Details tab for Measures now alerts users to save or discard changes when navigating away without saving. It now includes an option to Discard Changes.
Measure Creation	Users can now enter information about Risk Adjustment for their measures on the Details tab.
Navigation	Users can now navigate from the Edit measure page to the Measure List page by clicking on the Back button.
Navigation	When searching for a measure, the search results are retained when a user selects the Next button.
Navigation	When searching for a measure, the search results are retained when navigating to additional pages of results.
Navigation	Styling for buttons throughout MADiE have been updated for consistency.
Navigation	Validation messages throughout MADiE have been updated for consistency.
Navigation	The design of the Test Cases tab has been updated to remain consistent with other tabs within MADiE.
Navigation	Styling for links throughout MADiE have been updated for consistency.

Category	Feature Description
Navigation	Dropdown fields throughout MADiE have been updated to use type ahead functionality.
Navigation	The Details tab for Measures has been updated to remain consistent with other tabs within MADiE.
Test Case Creation	The Test Case JSON editor has been updated to enable the Save button when the page has loaded.
Test Case Creation	Users can now use the Discard Changes button to clear the data from the JSON Test Case Editor.
Test Case Deletion	Users are now able to delete test cases.
Test Case Execution	When the measure group is updated, test cases can now be executed to view updated tests results.
Test Case Execution	In some instances, users received a non-numeric Coverage percentage. This has been updated.
Test Case Execution	Users can now view the pass and fail results for all population criteria on the Test Case List page.
Test Case Execution	When entering a value for Measure Observation, users can now include decimals.
Test Case Execution	Users can now execute test cases that only contain warnings. JSON that contains errors will continue to prevent users from executing test cases until the errors are resolved.
Test Case Execution	Users can now execute test cases against Stratifications and Measure Observations
Test Case Execution	The Population Basis and Scoring Type now display on the Test Case screen to improve usability when creating test cases.
Test Case Execution	Errors generated upon test case execution are now cleared, when the errors are resolved, and the test case is executed.
