MADiE Known Issues

Execution Known Issues

Note, for these issues the MADiE Team is working with the FQM-Execution Team to address these updates. We hope to include updates in a December Release.

Date Added	Issue Description
11/17/22	Ratio Measures with single Initial Population and Measure Observations will not calculate properly
11/17/22	Ratio Measures with two Initial Populations will not calculate properly

December Release

The following issues are being addressed as part of a December Release.

Date Added	Issue Description
11/17/22	CQL validation issues occur when a definition name is resolvable to a quoted identifier, but the definition name is not in quotations. Users may not receive CQL validation errors, however the Population Criteria section won't render, and a blank screen will display. **Work around:** Quotes should be added to all define statement names, even when it is resolvable to a quoted identifier.
11/30/22	Measures that have been transferred from MAT to MADiE are currently not displaying the correct version number on the Measure List page. This is a display issue only.
11/30/22	Measures that have been transferred from MAT to MADiE should retain the version number for the primary CQL Library. Currently, when a user edits the measure on the CQL Library Editor page, the measures' primary CQL library is changed to version 0.0.000. Currently users cannot update this version number in the CQL Editor.
12/2/2022	If a user transfers measures from MAT to MADiE, MADiE is only recognizing the measure types that are present in the HL7 measure type list. These types include Outcome, Patient Reported Outcome, Process and Structure. If a user tries to transfer a measure that is not one of these types, the transfer action is not completing. **Work around:** Users can change the measure type to one of the four accepted measure types in MAT prior to transferring it to MADiE.
