# MADiE 1.1.4 Release Notes

The following updates are included in the MADiE 1.1.4 release:

| Category | Feature Description |
|---|---|
| Test Case Execution | MADiE has been updated to improve error handling on the Test Case list page and the Edit Test Case page. |
| Resolved Known Issues | **Date Added: 01/31/2023** MADiE had previously introduced validations to help users create QMIG-compliant population criteria. MADiE is currently incorrectly validating the use of some functions. When the CQL contains a function with a complex argument type in the primary library, users may receive an error when trying to create a population criteria: 'Failed to create the group'.   BONNIEMAT-1343<br><br>**Date Added: 02/20/2023** When a measure containing a standalone CQL Library is calculated against test cases, it utilizes the ELM for that library that was translated at the time the individual library was versioned. If a standalone CQL library was versioned and the ELM created by an earlier version of the Translator than MADiE currently uses, the user may receive inaccurate test results or an error message. BONNIEMAT-1343<br><br>**Note**: When a user is working on a draft measure, MADiE will use the latest CQL-to-ELM Translator version for test case execution and for exports. Additionally, once versioned, the ELM output will be saved and utilized during test case execution and export. |
