Bonnie QDM 5.1.4 Release Notes

The following updates are included in the Bonnie QDM 5.1.4 QDM Contingency Plan release:

Category	Feature Description
Test Case Creation	Bonnie QDM has been updated to differentiate between Measure Observations on the test case info and edit pages.
Test Case Export	Updated Excel export functionality to use DENOM_OBSERV and NUMER_OBSERV for Ratio Measure Patients
Resolved Known Issues	BONNIEMAT-1106 For Bonnie QDM, when measure observations are used in ratio measures, the measure observation logic is being executed against test cases, even if that test case did not first meet the numerator or denominator criteria. When measure logic cannot be modified, there is no workaround. This will affect the pass rate of the measure. BONNIEMAT-1522 For Bonnie QDM, users are unable to differentiate between the Observations displaying on the test case edit page.
