

## MADiE Known Issues

### CQL-to-ELM Translator Known Issues

<b>Date Added</b>	<b>Issue Description</b>
4/12/2023	There is an issue in how reasonCode is getting mapped to ELM for the CommunicationNotDone datatype in QI-Core 4.1.1. Refer to the following GitHub ticket for more information on this issue: <a href="https://github.com/cqframework/clinical_quality_language/issues/1153">https://github.com/cqframework/clinical_quality_language/issues/1153</a> <a href="#">BONNIEMAT-1420</a>

MADiE Known Issues

Date Added	Issue Description
<p>11/17/2022</p>	<p>CQL validation issues occur when a definition name is resolvable to a quoted identifier, but the definition name is not in quotations. Users may not receive CQL validation errors, however the Population Criteria section won't render, and a blank screen will display.</p> <p><b>Work around:</b> Quotes should be added to all define statement names, even when it is resolvable to a quoted identifier.</p> <p><b>Example:</b>            Before adding quoted identifiers:</p> <pre> 7 using QICore version '4.1.1' 8 9 10 include FHIRHelpers version '4.1.000' called FHIRHelpers 11 include CQCommon version '1.0.000' called Global 12 include SupplementalDataElements version '3.0.000' called SDE 13 include Status version '1.0.000' called Status 14 include Hospice version '0.0.000' called Hospice 15 include PalliativeCare version '1.0.000' called PalliativeCare 16 // include FHIRCommon version '4.0.012' called FHIRCommon //https://github.com/cqframework/ecqm-content-qicore-2022/issues/5 17 include QICoreCommon version '1.2.000' called QICoreCommon 18 19 valueset 'Congenital or Acquired Absence of Cervix': <p>12/21/2022</p>	<p>When users search for measure names and include special characters in the search criteria, the user may receive a 403 error, or the search results will not be returned.</p> <p><b>Work around:</b> Only include alpha numeric characters when searching for a measure.</p>

Date Added	Issue Description
10/10/2023	<p>Users will automatically be logged out of MADiE, MAT and Bonnie after 30 minutes of inactivity. If the user has more than one active session of MADiE, MAT or Bonnie in any combination (in different tabs in the same browser or in different browsers) and one of the sessions reaches 30 minutes of inactivity the session will expire, and the user will be logged out of all sessions. If the user is logged out prior to saving changes, any unsaved changes will not be retained when the user logs into MADiE, MAT or Bonnie again.</p> <p><b>Work around:</b> Users can keep all sessions active by clicking on the screen for each session periodically. Clicking on each active session prior to reaching 30 minutes of inactivity will prevent the sessions from expiring and prevent the user from being logged out of all sessions.</p> <p><a href="#">BONNIEMAT-1554</a>  <a href="#">BONNIEMAT-1623</a></p>
11/15/2023	<p><b>QDM Measures:</b> Status' date timing included in QDM test case JSON is not being saved after translation completes.</p>
1/25/2024	<p><b>QI-Core Measures:</b> There is an issue in how some QI-Core profiles are being mapped to their related FHIR resource types for data requirements, resulting in missing data requirements in the measure export.</p> <p><a href="#">BONNIEMAT-1720</a></p>
3/27/2024	<p>Measures transferred from MAT to MADiE need to be reviewed in MADiE and the CQL updated (can just add a space to the CQL) after the transfer and prior to working with the measure (including working with test cases or exporting the measure). Until this step is complete you may see a CQL error notification on the Test Cases screen and/or during Measure Export.</p>
4/19/2024	<p><b>QDM Measures:</b> When editing a MADiE test case that was imported from Bonnie QDM, if the test case description exceeds the allowable 250 characters, the 'Save' button is disabled and updates cannot be made to the test case.</p> <p><b>Work around:</b> Edit the MADiE test case description to less than 250 characters.</p> <p><a href="#">BONNIEMAT-1825</a></p>
5/8/2024	<p><b>QI-Core Measures:</b> When making edits on the Details tab, Name, Version &amp; ID sub-tab, if the Measure CQL Library Name exceeds 64 characters the 'Save' button is disabled and updates cannot be made to the page.</p> <p><b>Work around:</b> Edit the Measure CQL Library Name to not exceed 64 characters and save.</p> <p><a href="#">BONNIEMAT-1857</a></p>
