

MADiE Known Issues

CQL-to-ELM Translator Known Issues

Date Added	Issue Description
4/12/2023	<p>There is an issue in how reasonCode is getting mapped to ELM for the CommunicationNotDone datatype in QI-Core 4.1.1. Refer to the following GitHub ticket for more information on this issue: https://github.com/cqframework/clinical_quality_language/issues/1153 BONNIEMAT-1420</p>

MADiE Known Issues

Date Added	Issue Description
10/10/2023	<p>Users will automatically be logged out of MADiE after 30 minutes of inactivity. If the user has more than one active session of MADiE in any combination (in different tabs in the same browser or in different browsers) and one of the sessions reaches 30 minutes of inactivity the session will expire, and the user will be logged out of all sessions. If the user is logged out prior to saving changes, any unsaved changes will not be retained when the user logs into MADiE again.</p> <p>Work around: Users can keep all sessions active by clicking on the screen for each session periodically. Clicking on each active session prior to reaching 30 minutes of inactivity will prevent the sessions from expiring and prevent the user from being logged out of all sessions.</p> <p>MADIE-1554 MADIE-1623</p>
3/27/2024	<p>Measures transferred from MAT to MADiE need to be reviewed in MADiE and the CQL updated (can just add a space to the CQL) after the transfer and prior to working with the measure (including working with test cases or exporting the measure). Until this step is complete you may see a CQL error notification on the Test Cases screen and/or during Measure Export.</p>
4/19/2024	<p>QDM Measures: When editing a MADiE test case that was imported from Bonnie QDM, if the test case description exceeds the allowable 250 characters, the 'Save' button is disabled and updates cannot be made to the test case.</p> <p>Work around: Edit the MADiE test case description to less than 250 characters.</p> <p>MADIE-1825</p>

Date Added	Issue Description
6/12/2024	<p>Users may experience toggling back and forth between their current tab and a new tab or flickering and, in some cases, discontinuation of their MADiE session.</p> <p>Work around: Refresh the page or log out of all MADiE instances and begin a new MADiE session. MADIE-1922</p>
8/30/2024	<p>When importing QI-Core test cases from MADiE into a measure with Stratifications, the test cases will appear as if the measure does not have stratifications. This occurs even if the measure the test cases were exported from had stratifications.</p> <p>Work around: Navigate to the population criteria tab, modify any stratification, click save. Then navigate back to the test cases and stratification should now be present.</p>
11/06/2024	<p>QDM Measures: QRDA export will fail if a measure includes one or more test cases that have the Payer data element added, but no code selected for the data element.</p> <p>Work around: Update the impacted test cases to either add a code to the Payer data element or remove the Payer data element. MADIE-2043</p>
11/16/2024	<p>QDM Measures: Unexpected results are received for test cases that included a quantity prior to the update released with MADiE 2.0.7 on 10/12/2024.</p> <p>Work around: Users will need to update impacted test cases to edit the quantity and save the test case again. This will apply the update released with MADiE 2.0.7 to be applied to that test case. MADIE-2056</p>
11/20/2024	<p>QDM Measures: For Ratio and Continuous Variable measures, in test cases imported from Bonnie with observations, users may receive an error message and be prevented from editing the impacted test cases.</p> <p>Work around: Remove the observation expected value by zeroing out the relevant population (Numerator, Denominator or Measure Population), and then re-enter the expected values. If a test case has multiple observations, each will need to be updated accordingly. MADIE-2090</p>
4/16/2025	<p>QI-Core Measures: Test case execution is producing unexpected results after a measure draft is versioned.</p> <p>Work around: By creating a draft of the new measure version and running test cases, the test case execution will perform as expected. MADIE-2191, MADIE-2192, MADIE-2193</p>
