

MADiE 2.2.6 Release Notes

The following updates are included in the MADiE 2.2.6 release:

Category	Feature Description
UI Enhancement	<p>MADiE now allows users to set the pagination value to "All" on the My Measures and My Libraries tabs. Additionally, MADiE will remember the selected pagination setting for:</p> <ul style="list-style-type: none">• My Measures• All Measures• My Libraries• All Libraries <p>When users navigate away and return to a measure or library list, they will return to their previously viewed list and page position.</p>
UI Enhancement	<p>Error messages can now be minimized with an alert counter showing the number of hidden messages. Click the counter to restore all error messages. (MADIE-2159)</p>
Measure Creation	<p>Only error messages will display at the top of the screen in the error message panel. The warnings and information messages previously displayed in the panel will appear inline within the CQL.</p>
Measure Creation	<p>QI-Core Measures: The measure reference type 'Unknown' is removed from the available types of measure references.</p>
Resolved Known Issues	<p>Unable to add 2025 HCPCs codes through the CQL Builder. (MADIE-2219)</p> <p>QI-Core Measures: To ensure successful test case execution, datetime fields in test cases with reset timezones must include millisecond-level precision. This ensures the timezone format in MADiE matches the precision expected by the execution engine. (MADIE-2227)</p> <p>QDM Measures: Unable to delete some Attribute chips in QDM Test Case Builder. (MADIE-2228)</p>
