

MADiE 3.0.10 Release Notes

The following updates are included in the MADiE 3.0.10 release:

Category	Feature Description
UI Enhancements	- MADiE now keeps sessions active across multiple tabs, provides a warning before timeout with an option to stay signed in, and synchronizes session activity and logout status across all open tabs. (MADIE-1554, MADIE-1623) - Users automatically signed out due to inactivity will now be returned to the page they were viewing when they sign back in, allowing them to quickly resume their work without losing their place. - Users who access MADiE through a direct link while not logged in will now be taken directly to their requested page after signing in, instead of being redirected to the Measure List.
Measure Creation	QI-Core Measures: Users can now mark FHIR measures as Telehealth-eligible. This designation is saved with the measure and included in exported JSON, XML, and human-readable files. (MADIE-2382)
HAPI FHIR	QI-Core Measures: MADiE has been updated to use HAPI FHIR version 8.10.1. More information can be found here .
