

MADiE 4.0.1 Release Notes

The following updates are included in the MADiE 4.0.1 release:

Category	Feature Description
Measure Creation	Users can now save CQL with any using statement, regardless of the selected measure model. MADiE no longer modifies using statements during save.
Test Case Builder	US Quality Core Measures: Unsupported nested sliced extensions are now filtered from the Attributes dropdown, preventing unsupported types such as Address and ContactPoint from appearing as selectable options.
Administrator Functionality	MADiE Administrator functionality has been updated.
Liquid Template	MADiE has been updated to use Liquid Templates 0.5.6. More information can be found here .
Resolved Known Issues	US Quality Core Measures: • Test case resources that use references defined by the US Quality Core Implementation Guide as version-specific will fail validation. For example, if a measure includes a Claim resource that references an Insurance Coverage resource, the test case will incorrectly fail validation when the Coverage reference is evaluated. Work Around: This issue will be resolved in MADiE 4.0.1, which is currently targeted for release on September 15, 2026. Until that release, users may ignore the validation error. If users need to execute test cases before the issue is resolved, they can select the "EXECUTE TEST CASES REGARDLESS OF VALIDATION STATUS" checkbox and click Save to proceed with test case execution. • The HL7 links on the Available profiles tab are currently not opening the associated US Quality Core profile pages. These links are provided for reference purposes only, and no action is required by the user. Users who need to review the profile information can access the correct US Quality Core profiles directly at the following URL: https://fhir.org/guides/ncq/us-quality-core/en/profiles.html.
